

Improving Efficiency and Productivity for Retailers

DTR2430™/DTR2450™

Digital On-Site Two-Way Radios and Accessories

Do you speak digital?

Introducing the DTR2430™ and DTR2450™ Unlicensed Digital On-Site Two-Way Radios

Many retailers have discovered the benefits of two-way radios from Motorola for effective, affordable on-site employee communications. Now Motorola has introduced unlicensed digital technology to on-site two-way radios making them an even better solution for any retail operation.

Responsive service is essential to sales and customer satisfaction. DTR Series™ radios make responsiveness easier to provide, whether it's an answer to a customer's question, a price check, a clean-up or an emergency. With clear, constant communication ensured, all employees can make the most of their time.

Thanks to digital technology, DTR Series radios give you the ability to call specific groups of employees or even a single associate, privately and securely. You also get enhanced in-building coverage. All that productivity-enhancing capability and more are offered by the DTR2430 and DTR2450.

You get many other benefits, too, including digital audio quality which stays loud and clear everywhere you have coverage. Best of all, this pacesetting performance is yours without monthly fees or annual contracts and at a cost effective price.

RECOMMENDED FOR:

Owners, presidents, general managers, district managers, store managers, assistant store managers, buyers, supervisors, cashiers, attendants, salespeople, floor clerks, stock clerks, security, customer service and more.

*Coverage will vary based on terrain and conditions.

The Digital Difference

Why Motorola Digital On-Site Two-Way Radios Are Right For Retail

DIGITAL ONE-TO-ONE CALLING

DIGITAL ONE-TO-MANY CALLING

Private Group Call

Call security, audio quality, battery life and enhanced coverage aren't the only advantages of our new digital on-site two-way radios. No license is required to operate our 2400 MHz units, and for enhanced security, we added Frequency Hopping Spread Spectrum (FHSS). Unlike analogue radios, multiple group communications can occur simultaneously on the same channel.

In addition to these overall benefits, you'll be able to take advantage of many leading-edge operational features that were never available previously. And you'll soon wonder how you managed without them.

DIGITAL ONE-TO-ONE CALLING

Allows you to call and talk privately with a specific user's radio. A private-call recipient can receive an alert, either an audible or vibrating signal. And the recipient's unit displays the caller's ID.

DIGITAL ONE-TO-MANY CALLING

- **Public group call** – all other DTR Series radios on the same group ID and channel hear communications, similar to analogue radio operation.
- **Private group call** – enables you to programme DTR Series radios to communicate with specific sets of group members. Caller ID displays group identification.

Individual unit identification also enables:

- **Call forwarding to other radio IDs** – notify others that you're unavailable and allow them to speak with another contact for assistance.
- **Transmit ID** – receiving radios will display the radio ID of the transmitting unit.

The DTR2430 and DTR2450 also feature:

- **Short message service (SMS) text messaging** – with ten preset messages and support for editing and adding up to 25 custom messages to meet more specific needs.
- **Scroll list** – displays frequently used group and private IDs for easiest access.

It all adds up to a superb combination of features for your convenience, management, and productivity, all at an extraordinary value.

Excellence in Design; Exceptional Durability

Rugged and reliable, the DTR2430 and DTR2450 digital on-site radios undergo rigorous testing in the design process using U.S. Military 810 C,D,E and F Standards – so you can rest assured they will hold up under demanding conditions.
